POST TREATMENT CARE

## BRIDGE, VENEERS, OR CROWNS

---

Having a perfect smile is very exciting, and thanks to the use of a dental bridge, crowns, or veneers, the natural look and regular functions of your teeth will be restored.

Once the procedure is completed and your bridges/crowns have been cemented, **it's totally normal to feel discomfort**. To reduce the pain you might feel after your treatment, we invite you to **read this brochure** where you'll learn about and prevent post-treatment discomfort.

Although your new crowns, veneers, or bridges might look as natural teeth, **you'll need a few days** to get used to them.

## POST TREATMENT CARE

### BRIDGE, VENEERS, OR CROWNS

---

You must **keep your mouth clean** to prevent bacteria and/or an infection. Brush the treated area **very gently** with a soft toothbrush; you can wash the soft toothbrush with hot water to soften the bristles and begin flossing. After **1 week**, you can gently and gradually return to normal brushing.

If after your treatment you feel that your bite is not correctly balanced, please give us a call **as soon as possible** to make an appointment for the adjustments.

In case you are going home with temporary bridges or crowns, it is necessary to return to our clinic within **one month** to finish the treatment and place the permanent devices.
